Vysotnoye oborudovaniye samoletov (High-altitude Aircraft Equipment) Moscow, Oborongiz, 1958. 392 p. 7,000 copies printed.

Reviewer: Grishanov, N. G., Engineer-Colonel, Candidate of Technical Sciences; Ed.: Petrova, I. A.; Tech. Ed.: Rozhin, V. P.; Managing Ed.: Sokolov, A. I.

PURPOSE: This is a textbook approved by the Ministry of Higher Education of the USSR for the course "High-altitude Aircraft Equipment" at vtuzes. It may also be useful to engineers and scientific workers specializing in that field.

COVERAGE: The book describes the principles of construction, basic theories, and engineering design methods for the apparatus used in pressurized aircraft cabins and for oxygen equipment and presents also brief data on the physiology of high-altitude flight. The book mentions designers who made important contributions to the development of pressurized cabins and oxygen equipment, including V. A. Chizhevskiy (1931), A. Ya. Shcherbakov (1934-36), V. K. Gribovskiy (1936),

ORIG. PUB. : Turkmenistaniya ona Khozhalyeg, 1956, No.1, 89-91 (turkm.) S. Zh. Turkmenistana, 1958, No.1, 81-83

ABSTRACT : At Tuzkauzskaya Oblast (Turkmenia) the industrial plantings of Anabasis aphylla take up 50 thousand hectares. In May and June the dry young twigs and the shoots of the mature plants contain 3%, in June and August 2.5, in September 1.5 and in October 1% anabasin. The frost killed branches contain all in all several tenths of a percent of anabasin. Recommendations are given for preparing decoctions and infusions of anabasin locally for use in

TITLE: A Giant Broomrape

PERIODICAL: Priroda, 1959, Nr 3, p 116 (USSR)

ABSTRACT: This is a short description of a peculiar parasite and rather decorative plant - the Cistanche flava - often found in the sands of Kara-Kum and belonging to the species of the broomrapes. As a host of Calligonum, the Cistanche parasite that may attain a height of up to 2 m, deprives the Calligonum of its water reserves. This may lead to the eventual complete desiccation of the Calligonum concerned. Since Cistanche releases millions of minute wind-carried seeds, the parasite may become a real threat to certain areas. There is 1 photograph.

ORG: Kazakh State University im. S. M. Kirov (Kazakhskiy gosudarstvennyy universitet)

TITLE: Electron beam spectrometer for study of the spectra of turbulent pulsations in flows

SOURCE: Alma-Ata. Kazakhskiy nauchno-issledovatel'skiy institut energetiki. Problemy teploenergetiki i prikladnoy teplofiziki, no. 3, 1966, 232-241

TOPIC TAGS: turbulent flow, spectrometer

ABSTRACT: Industrial frequency analyzers of the ASChKh-1 type have a working frequency range from 20 to 20,000 cycles, which is appropriate for the study of turbulent pulsations in flows. However, it is known that the spectral function of turbulent pulsations falls sharply toward the high frequency side; therefore, the indications of an analyzer which has a uniform amplification over the whole spectrum do not give a sharp picture at high frequencies. The article shows details of the electrical circuits of a newly developed unit which overcomes this shortcoming (See Fig. 1).

TITLE: Experience with Automatic Flow Control of Cooling Water in a Hardening Bath (Opyt avtomaticheskogo regulirovaniya raskhoda okhlazhdayushchey vody v protochnoy zakalochnoy vanne)

PERIODICAL: Promyshlennaya Energetika, 1958, Vol 13, Nr 7, pp 14-16 (USSR)

ABSTRACT: Industrial consumption of cooling water is often excessive because the flow is not regulated and this wastes power on pumping. At the Mytishchi Engineering Works the consumption of cooling water in a flow type hardening bath was reduced by 80% by the use of automatic control depending on the temperature. This corresponds to an economy of 50 000 kWh per year. A schematic diagram of the installation is given. A thermal relay is installed near the outlet pipe of the hardening bath and operates a hydraulic valve on the water supply line. When hot parts are put in the bath the discharge water temperature rises and more cold water is delivered. The construction of the equipment is described in detail. The operating part of the

Card 1/2

94-13-7-7/25

Experience with Automatic Flow Control of Cooling Water in a Hardening Bath

thermal relay is a reconstructed automotive thermostat. Information is given about the installation and adjustment of the automatic equipment. It is found that when hot parts weighing 600 kg are put in the bath the hydraulic valve opens in 6 - 8 seconds. The cooling water is allowed to heat to a temperature of 40°C and if large quantities of heat are produced at this temperature it may be possible to make use of it.
There is one figure.

PERIODICAL: Voyenno-meditsinskiy zhurnal, 1958, Nr 2, pp 77-80 (USSR)

ABSTRACT: This article is devoted to description of setting up medical evacuation points in the field, using a light type of shelter described and illustrated (figs 1 and 7). The dressing section occupies 2/3 of the shelter, and the evacuation section 1/3. The equipment for both of these sections is described, and illustrated (figs 2-6). The equipment is collapsible and easily transportable. A model of the complete shelter (fig 7) is described, and its use for training purposes is described. There are 7 diagrams
